E-mail: corresponding.author@institute.ac.in

(Presenting author's name should be underlined. Use superscript numerals to link each author to an affiliation, as shown above.)

The abstract must be structured under the following headings and should be less than 1000 words.

Abstract: This document gives formatting instructions for authors preparing extended abstracts in Microsoft Word for publication in the program and proceedings IMC39. The authors are asked to follow the instructions given in the document when preparing their abstracts to assist the Local Organizing Committee with the preparation of the conference program and proceedings. You can use this document as both an instruction set and as a template into which you can type or paste your own text.

Keywords:

Provide **4–6 keywords**, separated by commas.

Introduction and Objectives: Clearly state the primary objective(s) of the study and the infrastructure-related problem being addressed. Explain the significance of the research in the context of **sustainable, resilient, safe, efficient, or future-ready infrastructure**. The specific research gap or challenge addressed by the study should be briefly highlighted.

Methods:

Briefly describe the methodology adopted, including the study area, data sources, experimental programme, analytical framework, numerical model, simulation approach, field investigation, or data-driven/AI/ML techniques, as applicable. Only the key methodological components necessary to understand the study should be presented.

Findings:

Present the principal findings of the study and their significance. Wherever possible, report important quantitative results, improvements, comparisons, or key observations. The findings should clearly demonstrate how the proposed approach contributes to improved **infrastructure performance, sustainability, resilience, safety, reliability, resource efficiency, or climate adaptability**.

Results and Applications: Explain how the findings can be applied by **engineers, infrastructure planners, practitioners, industry, policymakers, or decision-makers**. Highlight the potential contribution to infrastructure planning, design, construction, operation, maintenance, management, risk reduction, climate adaptation, or policy development.
